

Our Certifications

Our certifications fall into six main categories: Electrical, Fire, and Mechanical Safety, Hazardous Substances, Sustainability, and Acoustics. Each certificate earned demonstrates our commitment to quality, safety, and durability, while affirming our products and components have passed specific performance and quality assurance tests adhered to differing countries, regions, and product types.

At BuzziSpace, we develop our products with these standards in mind on top of keeping a close eye on the market to spot the need for region-specific certificates. Certifications needed for specific applications of our products to give our customers and clients peace of mind are also on our radar.

We are transparent about all our certificates on both a product and component level. Further details can be found in the “Declaration of Conformity” report available on each product page under “Certificates.”

Electrical Safety

Lighting Certification for Europe and North America

Our [lighting collection](#) has received CE marking and CB certification for the European market and therefore proves compliance to the applicable directives. Our lighting products are also tested by a third party against published IEC standards.

Lighting products for the US market are UL and cULus listed for both North America and Canada. They have been tested and comply with the applicable UL Standard, and maintain periodic inspection by a UL auditor.

Additionally, all of our electrical accessories carry the needed electrical safety certifications.

Fire Safety

The fire safety standards to which a product, components, and materials need to comply to is largely dependent on the product type, region, and application. To adhere to these fire safety standards, our focus is to ensure our products, components, and materials have been created without the excess of hazardous flame-retardant chemicals. [BuzziFabrics](#), BuzziFoams, and other fillings comply to fire standards without containing more than 1000 PPM of any flame-retardant chemical.

Our fire safety certifications include, but are not limited to, CAL117:2013, CAL133, ASTM E84, and NFPA 701.

Mechanical Safety

Some of our seating collection has been tested according to the BIFMA mechanical safety and durability standards. During the engineering process of [BuzziSpark](#), for example, we took the design rules and quality levels of both ANSI/BIFMA X5.4: 2012 (for the US market) and DIN EN 16139: 2014-03 Level 1/2 (for the EU market) to ensure the product complied to the mechanical safety, strength, and durability BuzziSpace stands for.

Testing on Hazardous and Harmful Substances

Different countries and regions demand other certifications proving the absence of hazardous substances and VOC's both on a product and component level. Our BuzziPicNic has a Blue Angel (Der Blaue Engel) certification, which holds high regard in Germany. Additionally, [BuzziPicNic](#) and a vast selection of our product range have also achieved the “Clear Air Gold” certification. Joined with our UL GREENGUARD Gold certified products, they all comply with both ANSI/BIFMA M71-2011 and CDPH 01350 Method V1.2.

Sustainability

— UL Greenguard Gold Certification

BuzziSpace is [UL GREENGUARD Gold certified](#), meaning our products meet some of the world's most rigorous, third-party chemical emissions standards. Studies have shown that people spend more than 90% of their time indoors, where air pollutants can be 2-5 times higher than outdoors. With the UL GREENGUARD Gold Certification, our products are scientifically proven to help reduce indoor air pollution and the risk of chemical exposure. Only the lowest emitting products receive the certification.

The UL GREENGUARD Gold Certification is internationally recognized in many Green Building Rating Systems, such as LEED, Fitwel, and BREEAM, amongst others, in addition to architects and designers looking to use sustainable products for their projects.

Our growing range of certified products includes our [acoustic desk partitions](#), [acoustic office dividers](#), [acoustic lighting](#), and [acoustic panels](#). Certification for each product can be accessed from their respective page. All of our certified products are also housed on the sustainable product database, [UL Spot](#). Access the [Press Release](#).

— PEFC (Programme for Endorsement of Forest Certification)

BuzziSpace obtained its [PEFC](#) chain of custody certification in 2019 (registration nr WOOD.BE-COC-001539). Recognized by the most prominent forest certification organization, our PEFC-certified wood used to make furniture comes from both legal and sustainable sources.

With PEFC certification, we ensure that the timber used to manufacture our products originate from sustainable forests and that these credentials can be passed on by the implementation of our chain of custody systems. The certification also enables us to give our customers peace of mind knowing that our wooden products come from well-managed certified forests.

Acoustic Certification

The acoustic properties of our products are tested in [Peutz](#), an acoustics laboratory in the Netherlands with an accreditation according to ISO / IEC 17025. We provide a full testing report with our customers to ensure complete transparency.
