BuzziFelt & Sliced BuzziFelt

Regular cleaning is important to maintain the appearance and prolong the life of the material. Dust and dirt wear down the material and also reduce its fire-retardant properties.

Do

- Vacuum-clean regularly.
- Remove dust using a soft brush, if needed.
- Treat spillages immediately.

Don't

- Don't wash.
- Don't use abrasive sponges or cloths.

Stain removal

First, scrape off any liquids or hardened residues with a spoon or a scoop before you proceed. Any loose particles must be vacuum cleaned before further cleaning. Liquids must be soaked up with an absorbent napkin or cloth.

- **Light stains:** carefully dab with a pH neutral soap and a clean damp cloth or sponge.
- **Greasy stains:** use appropriate detergents or solvents. In all cases, we recommend testing stain-removal agents on an inconspicuous area first, to see if any effects are visible.
- **Large, heavy stains:** professional dry clean is recommended.

WARNING: Do not rub the material hard because this could result in damage to the texture. Be careful when using solvents because these could dissolve the material beneath.

Fabrics - Upholstery

Regular cleaning is important in order to keep the upholstery textile looking its best and to prolong its life. Dust and dirt wear down the textile and also reduce its fire-retardant properties.

Do

- Vacuum-clean regularly, at half power where appropriate.
- Remove dust using a soft brush, if needed.
- Treat spillages immediately.

Don't

- Don't wash.
- Don't use abrasive sponges or cloths.
- Don't steam products with a 3D pattern.

Stain removal

First, scrape off any liquids or hardened residues with a spoon or a scoop before you proceed. Any loose particles must be vacuum cleaned before further cleaning. Liquids must be soaked up with an absorbent napkin or cloth.

- **Light stains:** carefully dab with a pH neutral soap and a clean damp cloth or sponge. Edge marks can be avoided by dabbing gently in circular motions towards the center of the stain with a clean lint-free cloth.
- **Greasy stains:** use appropriate detergents or solvents. In all cases, we recommend testing stain removal agents on an inconspicuous area first, to see if there are any effects.
- **Large, heavy stains:** professional dry clean is recommended.

Make sure to dry the fabric fully before use. It may also be necessary to use a hairdryer to avoid leaving edge marks. This applies especially to microfiber textiles.

WARNING: Do not rub the material hard because this could result in damage to the texture. Be careful when using solvents because these could dissolve the material beneath.

Metals

Do

- Clean as needed using a soft cloth or brush with a mild detergent.
- Use coasters under hot objects such as coffeepots and cups (avoid temperature extremes).
- Lift objects to move them.
- Use a protective desk pad under all writing areas and business machines.

Don't

- Don't use abrasive cleansers abrasive cloths or sponges as this will scratch the surface.
- Don't use cleaners containing chlorine.
- Don't expose the furniture to extreme heat, cold or humidity variations (keep away from radiators, air conditioning vents, humidifiers, fireplaces, etc.).
- Don't pull items across the metal as this may scratch the surface.

Stain removal

- Use warm water and a non-abrasive cloth and pH neutral solution.
- Dry the metal after cleaning.

Refinishing

In the event that scratching or marring has occurred, we recommend that refinishing be carried out by a professional furniture refinishing company.

Cleaning guidelines* | May 2020

To anticipate questions regarding the viability of Corona-type viruses and the use of additional disinfectants on porous materials – such as BuzziFelt, Fabric, and Trevira CS – we can share the following:

Viability of Corona-type viruses

Current studies¹ show that Corona-type viruses survive longer on hard, smooth surfaces such as metal, glass, and plastic. So far, research suggests that the virus has a shorter survival time on soft, porous surfaces such as fabrics.

How to clean felt or fabric covered products?

World Health Organization² advises the use of additional disinfectants, such as ethanol and household bleach. We can confirm that spraying these on BuzziFelt, Fabric and Trevira CS repetitively, does not affect the texture, color, or performance.

Ethanol

Ethanol can be used in its commercially available form (70% alcohol or more).

Household bleach

Household bleach can be used as a dilution, ranging from 1 unit of bleach in 50 units of water to 1 unit of bleach in 20 units of water.

How to apply?

Always use a sprayer. Never soak the product in one of the above-mentioned solutions.
